About

Surbhi’s journey started at the University of Manchester, where she was awarded her degree in Renewable Energy and Clean Technology in 2017. Surbhi has always cared about protecting the environment, and this degree gave her a solid foundation.

After graduating, Surbhi worked with several startups, where she created and maintained machine learning models for predicting electricity demand and solar power production. She then went on to complete a Master's in AI for Sustainable Development at University College London (UCL) before joining ICCS as a Research Software Engineer in 2023.

Green DiSC

Surbhi is one of ICCS's Green DiSC Representatives, leading ICCS's work on the environmental impact of its computing activities. Green DiSC is an open-access Digital Sustainability Certification for research groups, developed at the University of Cambridge and hosted by the Software Sustainability Institute.

In this role, she coordinates ICCS's initiatives towards Green DiSC Bronze certification, including tracking inventories of the group's computing hardware, data and infrastructure, and promoting green computing practices through training and shared resources among group members and other research groups. For questions about sustainable computing at ICCS, email Surbhi.
